Extensive product line and coverage

AMSOIL Technical Service

1-715-392-7101

Our service is provided for your benefit and is available from 8:00 AM to 5:00 PM Monday through Friday Central standard time.

The Technical Service group ***will*** assist you with information relative to:

- Part Number Interchange
- New Number Availability/Pricing
- Applications not listed in current catalogs
- Filter Specifications

Technical/Product Managers may be called upon to provide information on:

- Recommendations for special applications (ratings, remote mounts, add-ons, etc.)
- Helpful technical pointers to sell our products to customers.
- Descriptions and discussion of the variety of filtration systems design, function and flow patterns. (fluid and air)
- Printed educational materials
- Product warranty explanations
- Backorders
- Inventory Status
- Product Release Dates
- Explanations of laboratory performance test procedures.
- Filtration systems trouble-shooting and problem solving

We appreciate the opportunity to provide these services to you.
Your comments and suggestions are welcome.

NO PRODUCT LISTED IN THIS CATALOG HAS BEEN CERTIFIED FOR AVIATION USE. APPLICATIONS ARE VERIFIED FOR VEHICLES SOLD ONLY IN THE UNITED STATES OF AMERICA.
This catalog and all information herein supersedes all previous filter catalogs and information material.

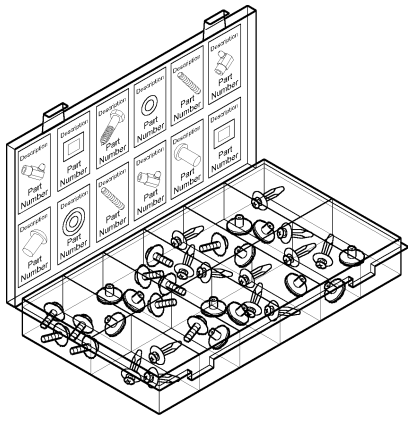
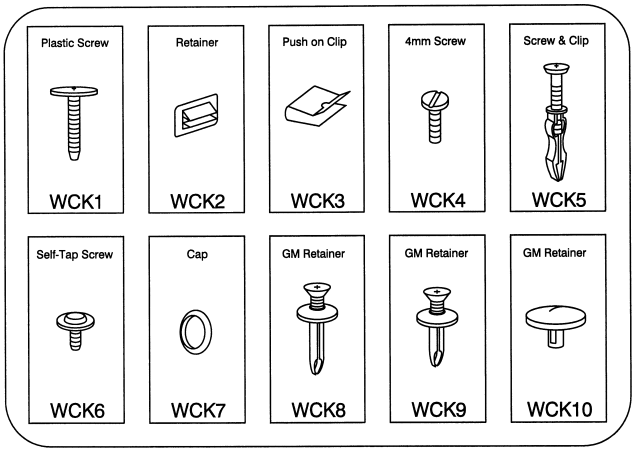
Introducing the Pollution Solution for Interior Air Filtration

WIX Filters wants to make sure that you are breathing the cleanest air possible in your car. You may not know it, but car manufacturers are installing air filters in today's vehicles that filter out contaminants and odors from the air you breath inside your car. Experts have stated that the air inside your car can be 10 times worse than outside your car. The WIX Cabin Interior Air Filters are designed to remove particles as small as 0.03 microns. That's less than one-millionth of an inch in diameter. The recommended replacement interval is from 12,000 to 20,000 miles depending on your driving conditions.



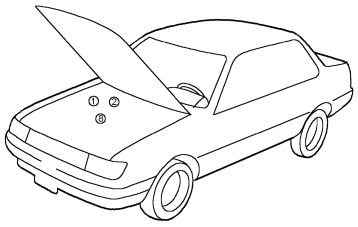
WIX Cabin Air Filters: Designed to Improve the Air Quality *Inside* Your Car

- Some vehicles have had cabin air filters for 10 years.
- Vehicle manufacturers are placing cabin air filters in today's models.
- The cabin air filter could be working all the time your car is running.
- The cabin air filter is filtering air whenever the heater, air conditioning or vent is on but not in the re-circulation mode.
- Clogged filters will cause both the air conditioner and heater cores to work harder, which could lead to damage.
- Clogged filters can reduce the airflow into the passenger compartment.
- 25% of the U. S. population suffers from some type of allergies. A new WIX filter will mean cleaner air to breath.
- In addition to filtering particles some cabin air filters remove odors from the air.

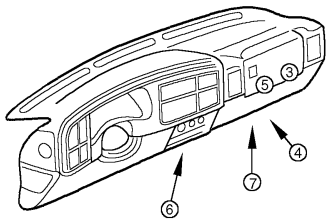


The WIX # 24250 Maintenance Kit

This assortment contains 10 various style screws, clips and retainers to assist installers when changing out many of the most popular cabin air filters. When replacing cabin air elements, often the screws, clips and retainers are damaged or lost. This kit is a great source for these hard to find parts.



Note: These individual parts can now be purchased separately. Each part number comes in a pack of five or ten individual units per box. See chart below.



Wix Part #	Description	Qty per pack
WCK1	Plastic Screw Taurus/Sable	10
WCK2	Retainer Taurus/Sable	10
WCK3	Push on Clip Taurus/Sable	5
WCK4	4mm Screw Taurus/Sable	5
WCK5	Screw & Clip Contour/Mystique	5
WCK6	Self-Tap Screw Contour/Mystique	10
WCK7	Cap Contour/Mystique	10
WCK8	GM Retainer (Long)	5
WCK9	GM Retainer (Short)	5
WCK10	GM Retainer (Cap)	5

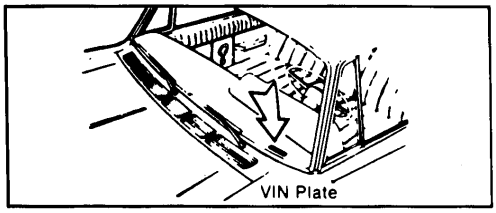
WAUK ..... Waukesha
WISC.....Wisconsin
2WD .....Two Wheel Drive
4WD ..... Four Wheel Drive

VIN CODES - IMPORTANT SERVICE INSTRUCTIONS



(Remember, be sure to check catalog before every filter change!)
CORRECT ENGINE AND FILTER IDENTIFICATION

In some domestic vehicles, there are two or more engines that are the same size but do not use the same products. In order to properly identify the correct product for your vehicle, you must first match the engine code from your vehicle identification number (VIN) with the character listed in our Application Section.

If your vehicle is a Chrysler, Ford or GM product manufactured from 1972-80, use the fifth character on the VIN Plate, or if it was manufactured from 1981-06 use the eighth character.

If your vehicle is manufactured by AMC/Eagle (except Jeep) from 1974-80, use the seventh character, 1981-88 uses the fifth character and 1989-06 uses the eighth character.

If your vehicle was manufactured by Jeep from 1972-74 (up to Serial Number 100000), use the eighth character, 1974-80 uses the seventh character, 1981-88 uses the fourth character and 1989-06 uses the eighth character.

CHRYSLER, FORD AND GM

1972-80
1H35LR100001
(Fifth Character)

1981-06
1G3AL69N6CM100001
(Eighth Character)

AMC/EAGLE/JEEP

1974-80
A3M798Z700001
(Seventh Character)

1981-88
2CEUN3870GB419062
(Fourth Character)

1989-06
2D3BB66U9LH038364
(Eighth Character)

CROSS REFERENCE WARNING

IMPORTANT: When a specific filter is not shown in the application guide for a specific automobile engine, it should be interpreted that we probably do not have a filter to fit. Any use of an interchange table to find a substitute is done at the installer's risk.

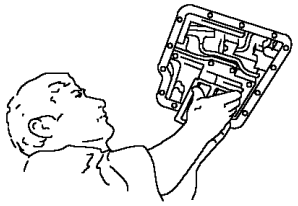
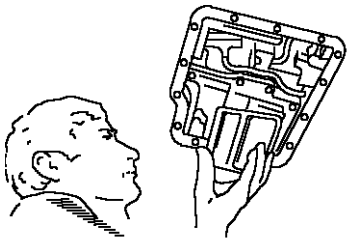
HELPFUL HINTS FOR INSTALLATION

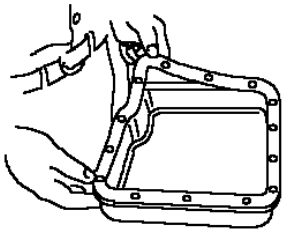
1 **NO SPECIAL TOOLS REQUIRED.** These are the simple tools required to do most normal replacement: • Speed Wrench • ½" Socket • Screwdriver • 7/16" Open End Wrench. No mechanical or hydraulic components in the transmission are disturbed during the change. The filter is simply removed with a screwdriver in just a few seconds, and replaced in the same short time.



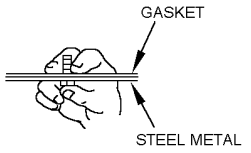
2 **POSITION TRANSPAN, ® DRAIN FLUID, REMOVE BOLTS AND DROP PAN.** Start removing bolts at one corner, alternating from side to side, allowing pan to gradually tilt downward in one direction for easy draining.



3 **SCRAPE OFF OLD GASKET AND CLEAN PAN** and case. Clean the pan inside and outside. Straighten pan around bolt holes.



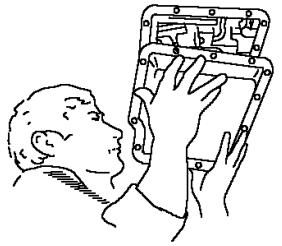
4 **REMOVE OLD FILTER.** The filters are either held in place with bolts, screws or simply slip in and out.



5 **POSITION NEW FILTER AND REPLACE SCREWS.** Everything you need to replace the filter is included in the filter kit, filter, pan gasket and "O" ring (when required).

6 **INSTALL NEW GASKET.** Unfold gasket and place on top of the clean and dry sheet metal surface. **DO NOT USE ADHESIVE-SEALANTS.**

Align the GRIPPER™ gasket with the sheet metal. Then pass the bolt through the sheet metal and continue to press the bolt through the gasket material which has slightly undersize bolt holes. This procedure will retain the gasket to the sheet metal pan. Repeat this procedure until all bolts are in position. Wipe excess oil from the transmission flange. Avoid oil accumulation on pan gasket at time of assembly. Place transmission pan gasket assembly in alignment with transmission and install bolts.



7 **POSITION PAN TO CASE AND REPLACE BOLTS.**

(A) Hand tighten or use power tools with proper torque setting capabilities.

(B) Snug up bolts. Start in center of pan; then continue to the opposite side, crisscrossing and working towards outer end of pan.

(C) Tighten to 80 inch-pounds using the same sequence. (Based on 5/16-18 (NC) fastener.)

(D) Then apply final torque of 120 inch-pounds, repeating the bolt tightening sequence.

8* **REFILL TRANSMISSION.** Lower car. Remove dipstick from oil filler tube, add transmission fluid as recommended by car manufacturer. Apply parking brakes, start engine in park, **DO NOT RACE ENGINE.** Move control lever through each range. Immediately check fluid level with selector lever in park, engine running and vehicle on level surface. Add additional fluid to bring level to ¼" below the "add" mark on dipstick.

NOTE: DO NOT OVERFILL.

*** USE PROPER FLUID-CHECK OWNERS MANUAL**

TSB: DT– 2005-09-28

Technical Service Bulletin

Date: 9/26/2005

Product Description: AMSOIL Automatic Transmission Fluids and Filters

Subject: AMSOIL Automatic Transmission Fluid and Filter Change Procedures

OBJECTIVE:

To provide the AMSOIL Dealers with the proper automatic transmission fluid and filter change procedures.

ISSUES:

Many quick lube oil change companies are using flushing machines to change the automatic transmission fluid. Using flushing machines does not address the need for cleaning the sediment in the transmission pan, cleaning the magnet inside the transmission pan, or changing the transmission oil filter.

TECHNICAL DISCUSSION:

Flushing machines are used to provide a quick transmission fluid change, however they do not address transmission pan cleanliness or filter changes. By taking the transmission pan off, sediment in the pan as well as the magnet can be cleaned, and the fluid filter can be changed. Manufacturers recommend a filter change with the oil change, and recommend against the use of flushing machines due to possible fluid contamination from pan sediment.

RECOMMENDATION:

AMSOIL recommends transmission fluid and filter changes based on the following 14 steps. For a transmission pan and filter oil change follow steps 1 through 12 and 14, for a complete system flush and filter change follow steps 1 through 14.

1. Access the AMSOIL web page (www.amsoil.com) and click on the On Line Product Applications Guide for the correct transmission fluid, amount of fluid and transmission filter before starting the transmission and filter change procedure. Have these on hand when starting the fluid and filter change. If the on-line Product Application Guide does not list your information, contact AMSOIL Technical Department for help.
2. For best results, transmission fluid should be at normal operating temperature before draining the fluid (Caution: fluid will be hot).
3. With the engine off, position a drain pan under the transmission pan and drain the fluid by loosening the pan bolts. Loosen one corner more than the rest to direct the flow into the drain pan.
4. Finish removing the transmission pan bolts, and lower the transmission pan down carefully (Some fluid is still in the transmission pan).
5. Remove the old filter and discard. Most transmission filters are held in place with a bolt or two however, some are held by a clip. Make sure filter O-rings or seals are discarded with the filter.
6. Install the new filter by using the same bolts or clips and use a new O-ring or seal (supplied with the new filter).
7. Inspect the pan before cleaning. A small amount of fine gray clutch dust is normal. However, if you find metal shavings, there could be a mechanical malfunction or transmission damage.
8. Clean the transmission pan thoroughly with solvent and wipe dry so there is no harmful residue. In some transmission pans there is also a magnet that should be cleaned and reinstalled in the same position in the transmission pan. Clean the transmission and transmission pan mating surfaces of all gasket material being careful not

Submitted By: KD **Reviewed By:** **Approved By: Alan Amatuzio** **Date: 09/27/2005**

Distribution: ___Internal _X_All

to damage the surfaces.

9. Position the transmission pan gasket on the pan. Some gaskets have four holes slightly smaller than the rest to allow threading four bolts through the pan and through these smaller gasket holes to hold the gasket in place.

10. Hand-tighten the transmission bolts in a crisscross pattern until snug. Use a torque wrench to tighten the bolts to the proper ft-lbs using the manufacturer recommended torque specifications.

11. Refill the transmission through the dipstick fill hole using the amount shown as "refill capacity" in the owner's manual or the AMSOIL "product Selection Guide" (G-50).

12. If performing a transmission pan fluid replacement only, skip to instruction 14. If doing a complete transmission pan and torque converter fluid replacement, follow the steps in instruction 13.

13. Follow these additional 5 steps for complete transmission pan and torque converter fluid replacement.

    1) Obtain the total transmission fluid capacity from the manufacturer or AMSOIL and have that amount of transmission fluid available.

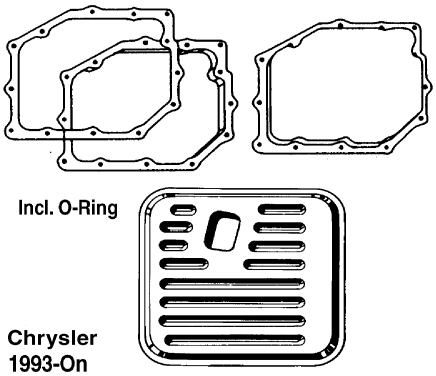
    2) Place a drain pan large enough to hold the total fluid capacity under the oil cooler. Disconnect the oil cooler lines from the oil cooler and direct the lines toward the drain pan.

    3) With another person, be prepared to add ATF to the transmission fill hole (dipstick hole) at the approximate rate as the fluid is being pumped out the transmission line into the drain pan.

    4) Start the engine, and as the old fluid is pumped out, add fresh fluid into the transmission fill hole.

    5) When either the fluid color brightens or the total capacity has been replaced, shut the engine off and re-attach the oil cooler lines. All fluid in the transmission pan and torque converter has now been changed.

14. With the vehicle on level ground recheck the fluid level using the manufacturer procedures outlined in the owners manual. Check the transmission and lines for leaks.



DISCLAMER:

The automatic transmission fluid and filter change procedures are meant to serve as guidelines only. These guidelines do not take into consideration variations between vehicles. Changing transmission fluid should only be conducted by individuals with the proper mechanical knowledge and training. Personal injury and/or transmission problems can occur when the proper precautions are not followed. If in doubt, have your transmission serviced by individuals capable of performing this function.

FOR REFERENCE PURPOSES ONLY—CHECK VEHICLE APPLICATION LISTING FOR CORRECT AMSOIL FILTER.

Hsg (Housing) . . . AMSOIL NUMBER is Replacement Element to be used in filter housing assembly. Amsoil part numbers in **bold** Wix part numbers in regular type

Italicized Part Numbers Are Invalid And Not Available Until Officially Announced Through New Number Announcement.
